## About this Website

### eCoLoRe

[News](#)[Overview](#)[Consortium](#)[Contact Us](#)[About the Site](#)

### Materials

[Guidelines](#)[Source Files](#)[Translation](#)[Memories](#)[Terminology](#)

### Links

[Glossaries](#)[Localisation](#)[Software](#)

The eCoLoRe website is the principle means of distributing materials created as part of the project to the wider community.

### Localisation

It aims to implement good practice in localisation in web design, in terms of user-friendliness and ease of management.

Content will be made available in as many languages as possible within the scope of the project.

- Language selection menus appear on every page of the site. Where a page is not currently available in the requested language, alternatives are offered.
- Wherever possible, suitable characters are used, not only for letters and diacritics, but also in punctuation, e.g. quotation marks.

Please note that, while our pages include metadata describing the language and character encoding (Unicode - UTF-8) used, you may need to experiment with your browser's character encoding settings for all language versions to display properly. These are often found in the "View" menu of graphical browsers.

### Accessibility

Accessibility, in more general terms, is also a priority. We have taken care to ensure that the site does not depend on the use of particular software or settings, and that established standards have been met.

- All pages served to end users should be valid HTML4.01.
- Graphical material is labelled to describe its content for those who cannot access it directly, whether because of visual impairment or the capabilities of their browser.
- Sizes of fonts etc are relative, and are therefore independent of specific settings.
- Alternatives are provided to the (minimal) use of

JavaScript, i.e. the language selection menus.

- The simple tabular layout of our pages is handled gracefully by text-only web browsers, such as Lynx. Additional links are provided to aid navigation in non-graphical user agents.
- While we recognise that value of separating style from structure, only the most widely supported features of the CSS (Cascading StyleSheets) standard have been used.

We take time to make sure that the content of our pages is clear in a number of web browsers, including: Konqueror, Mozilla and Lynx on Linux; Internet Explorer, Netscape, and Opera on Windows. If our pages are not displayed clearly by your chosen software, please let us know.

### **Behind the Scenes**

The user should always be the focus of good web design. However, the way in which the site works on the server side has implications for users, even though they may be hidden from view.

Each page on the site is generated using XSLT stylesheets from DocBook-compliant XML source files. Separate files containing navigation links and the main content are combined to generate webpages. This has several advantages for both content and localisation management.

### ***Content Management***

- Content is separated from the final form in which it is presented.
  - Content only needs to be modified at one point in the source. For example, when a new navigation link is added, all pages will incorporate this automatically.
  - All pages on the site are formatted consistently. A change to a font in the stylesheet will be reflected in all pages which are subsequently output in any language. This process should also help to ensure validity of the output.

### ***Localisation Management***

- Each language version is held in a separate file. A wrapper file incorporates all language versions of each page of content.

- New translations can be dropped in with minimal side effects on existing material.
- We can work on the different language versions independently, thus simplifying translation and maintenance.
- Links point to the wrapper file. Parameters are appended as suffixes to these links to control the processing of the stylesheet so that content is delivered in the requested language. This means that a users' language preferences persist from page to page, without any dependence on their software or setup. We do not use cookies.

### Further Information

- Guidelines for Usage of DocBook markup in eCoLoRe documents.
- Example files that illustrate the way in which the different language versions of a given page are wrapped together. Templates are also provided to assist in the creation of compliant documents.

## Il sito eCoLoRe

Questo sito è il principale veicolo di distribuzione dei materiali realizzati nell'ambito del progetto eCoLoRe.

La colonna di link che compare sulla sinistra si ritrova, identica, in tutte le pagine del sito.

Le pagine a cui fa riferimento il primo gruppo di link riportano informazioni generali sul progetto. Oltre alle novità, queste pagine offrono anche una descrizione del progetto, una presentazione dei membri del consorzio eCoLoRe, nonché un elenco dei contatti. Perchè tutti gli utenti possano condividere le proprie osservazioni con il gruppo eCoLoRe sono stati istituiti anche dei forum.

Le risorse principali del sito si trovano nella sezione Materiali. Esistono due tipi di materiali:

- Linee guida - queste risorse, presentate in forma di moduli, si propongono una duplice finalità. In primo luogo forniscono informazioni essenziali sui processi e gli strumenti per la localizzazione dell'eContent. In secondo luogo, offrono delle indicazioni per la scelta e per la creazione dei materiali didattici da utilizzare nelle esercitazioni con gli strumenti informatici di localizzazione e di traduzione assistita. A ciò si aggiungono delle brevi presentazioni introduttive sui materiali proposti.
- Training kit - questi pacchetti contengono dei testi modello che rispecchiano varie tipologie testuali e diversi formati informatici (per es. .html, .doc, .ppt, WinHelp, .xls), nonché le rispettive memorie di traduzione già avviate. Questi materiali possono essere impiegati in tutta una serie di contesti didattici per esercitazioni con gli strumenti informatici di traduzione assistita e localizzazione.

Tutti coloro che hanno avuto modo di utilizzare i materiali eCoLoRe sono invitati a contribuire al progetto inviandoci un feedback.

L'ultima sezione è una raccolta di link ad altri materiali disponibili online sulla localizzazione dell'eContent. In questa sezione, oltre alle risorse strettamente correlate agli standard per la localizzazione e alle rispettive organizzazioni, vi sono anche link ai siti di produttori software, progetti che vertono su tematiche correlate e glossari specialistici.
